1 [Papers: Analysis of errors in network load measurements](#)

Stanislav Belenki, Sven Tafvelin

January 2000 **ACM SIGCOMM Computer Communication Review**, Volume 30 Issue 1

Full text available: pdf(750.73 KB)

Additional Information: [full citation](#), [abstract](#), [references](#)

The paper identifies elements in network monitoring systems that cause errors in the load measurements found in recent reports on network statistics from an academic backbone network. Two types of network monitors are investigated: counter-based and packet capturing. The paper explains how to assign an accuracy term to the load values in case of counter-based monitors and how to eliminate distortion in the case of packet capturing monitors. The paper also suggests an MIB to reduce the counter-ba ...

1 [Towards an integrated, web-executable parallel programming tool environment](#)

 Insung Park, Nirav H. Kapadia, Renato J. Figueiredo, Rudolf Eigenmann, José A. B. Fortes
 November 2000 **Proceedings of the 2000 ACM/IEEE conference on Supercomputing (CDROM)**

Full text available:

[pdf\(4.86 MB\)](#) [Publisher Site](#)

 Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We present a new parallel programming tool environment that is (1) accessible and executable "anytime, anywhere," through standard Web browsers and (2) integrated in that it provides tools which adhere to a common underlying methodology for parallel programming and performance tuning. The environment is based on a new network computing infrastructure developed at Purdue University. We evaluate our environment qualitatively by comparing our tool access method with c ...

2 [Software tools: A unified framework for nonlinear dependence testing and symbolic analysis](#)

Robert A. van Engelen, J. Birch, Y. Shou, B. Walsh, Kyle A. Gallivan

 June 2004 **Proceedings of the 18th annual international conference on Supercomputing**

Full text available:

[pdf\(147.96 KB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper presents a unified approach for generalized induction variable recognition and substitution, pointer analysis, analysis of conditionally updated variables, value range analysis, array region analysis, and nonlinear dependence testing. The analysis techniques share a well-defined uniform approach based on the chains of recurrences algebra. The uniform algebraic approach provides a powerful unified framework for developing analysis algorithms for restructuring compilers. The paper intro ...

Keywords: compiler

3 [Building analytical models into an interactive performance prediction tool](#)

D. Arapattu, D. Gannon

 August 1989 **Proceedings of the 1989 ACM/IEEE conference on Supercomputing**

Full text available:

[pdf\(1.01 MB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper we describe an interactive tool designed for performance prediction of parallel programs. Static performance prediction, in general, is a very difficult task. In order to avoid

some inherent problems, we concentrate on reasonably structured scientific programs. Our prediction system, which is built as a sub-system of a larger interactive environment, uses a parser, dependence analyzer, database and an X-window based front end in analyzing programs. The system provides the user ...
